

IMMEDIATE RELEASE

Date: October 29, 2003

Naples Transportation & Tours Destination Services (NT&T) has just finalized to install the Nextel Direct Connect GPS monitoring and tracking system in all 27 vehicles. This is unprecedented in Southwest Florida and brings new technology to the transportation industry.

This system will elevate NT&T to the highest level of company communication with it's staff and drivers. In turn, clients of NT&T will receive the greatest efficiency in terms of service, reliability, and flexibility.

Features of the system include:

Ability to communicate with drivers at ALL times: the units are portable so the drivers will be able to carry the phone/GPS device inside airports, hotels, restaurants, or wherever they may be when not in the vehicle. This allows the operations dispatcher to reach ALL drivers at ALL times for any communication needed. NT&T will be able to respond to any inquiries by clients to know where their attendees are at ALL times.

GPS tracking: the phone/GPS device is monitored via satellite to the operations dispatcher's computer that shows where the vehicle is at ALL times. This allows better efficiency for last minute changes by allowing dispatcher to route closest vehicle to location of client. NT&T will have the fastest communication and operation in town to adjust to any last minute changes, flight delays, problems, etc. to deliver our clients to their destinations in the most efficient manner.

GPS safety information: a wide range of data is electronically wired to the computer that allows monitoring of information by the operations department. Route and speed of vehicle will be monitored and adjusted properly by operations department if needed. This allows NT&T to maintain the safest and most professional drivers in area.

Staff communication: all of NT&T's staff will have a Nextel unit with them at ALL times to allow better communication with any driver or staff member. This, coupled with the fact that most hotels/resorts in Southwest Florida also carry Nextel units will allow seamless communication between resort, client, and NT&T.

The uses of this system are almost limitless, so are the benefits to NT&T's clients. For further information, please contact our Director of Sales, Jeff Richardson, to see how your company can benefit from working with NT&T.
